DURAY[®] Intraoral Sensor

**THE DIGITAL SOLUTION
YOU ARE LOOKING FOR!**

Ultra-Thin & Comfortable Design

With an ultra-thin 4.4mm portfolio and ergonomically designed with rounded corners, it is easier than ever to position for bitewing images and offers a maximum level of patient comfort.

Durable & Reliable Performance

Duray Sensor is waterproof with IP68 protection and can be immersed in disinfectant liquids to prevent cross infections. Made with premium materials and designed with robust CNC shell fusion ultrasonic welding technology and tested with thousands of bending experiments during production processes to ensure durability and a long product life cycle.

High-Resolution CMOS Imaging

The leading 16-bit ADC chip brings you up to 60000+ greyscale crystal clear images in seconds. A high-definition sensor of up to 2.2 million pixels provides a theoretical resolution of 25 lp/mm. Produces clear and detailed images with very good contrast and sharpness for diagnosis so that subtle root apex bifurcation can be easily found.

Effortless Plug-and-Play Setup

Duray Sensor provides easy-to-operate and straightforward software with one-click smart installation and offers plug-and-play simplicity with a high-speed USB 2.0 connection. Equipped with powerful image processing functions, so you can significantly and quickly improve the quality of radiographs.

Sectional Matrix System

MEGA V represents the innovation behind the converging tines technology and the superior clinical performance only a sectional matrix system can provide. The use of heat-treated stainless steel, ensures the intended force is delivered to separate the adjacent tooth, freeing the clinician to perform class II restorations, quickly and efficiently.

The MEGA V sectional matrix system offers a single ring size intended for molars and premolars, which can be stacked to achieve multiple restorations at one time.
